Section 1

The formula, $y = mx + c$, is displayed inline. Some symbols and equations (such as $\sum x$ or $\frac{1}{2}$) are rescaled to prevent disruptions to the regular line spacing. For more voluminous equations (such as $\sum \frac{(\mu - \dot{x})^2}{n - 1}$), some line spacing disruptions are unavoidable. Math should then be displayed in displayed mode.

$$\sum \frac{(\mu - \dot{x})^2}{n - 1}$$
